

### Create your own eLearning «section»

Used as an educational portal, Tactic! LMS can be effective in the creation of a true virtual community. Based on the concept of sections, the platform provides individuals within an organization or of a line of activity with an online structure conducive to learning.

Part of the integral Tactic! software suite, Tactic! LMS is a web-based training management and distribution tool enabling users to efficiently manage learners, learning and learning places – both physical and virtual.

Tactic! LMS enables hybrid course structure creation, including synchronous (virtual classroom, traditional classroom and other) and asynchronous (online courses) activities, but also distribute courses, manage all user-related information, communicate within a virtual community (chat, discussion board, video conference) and assess performance.

Tactic! LMS supports skill management and represents a complete and flexible training solution enabling users to take advantage of every benefit e-Learning has to offer. Tactic! LMS is very simple to use and is a user-friendly and intuitive learning environment, complying with existing organizational processes. It is built on a CRM and ERP-type database structure.

Tested, integrated, secure and customizable, Tactic! LMS enables users to design trainings and efficiently manage every information, processes and actions related to an individual or an organization's knowledge acquisition. It is an overall learning solution.

Tactic! LMS is easily integrated in any technological environment, from secure Intranet to the ASP mode.

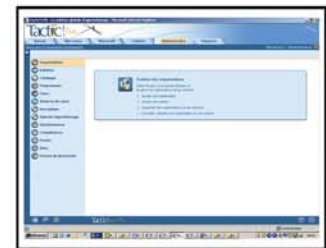

#### Features:
